

Vantage PRO2™ INSTALLATION DIAGRAM

Wireless Repeater First In Chain Network

This diagram shows a Wireless Repeater network, comprised two separate sets of repeaters. On one section of the network an Integrated Sensor Suite (ISS) is transmitting data to a Wireless Repeater, which relays the ISS data to a Vantage Pro2™ or Weather Envoy™ 2 Console. On another section of the network a Temperature/Humidity Station can simultaneously transmit data to an initial Wireless Repeater, which relays the data to a second repeater, which in turn relays the data to a Vantage Pro2 or Weather Envoy 2 Console.
